

## **RTAC LEGISLATIVE UPDATE**

### **March 13, 2009**

The State Highway System Length and Travel Statistics for 2007 have been released.

They indicate that the rural counties (the thirteen other than Maricopa and Pima), contain 82.5% of the state route miles and 76% of the lane miles.

In addition, the thirteen other counties experienced 44.5% of the daily vehicle miles traveled on the system. Maricopa County experienced 46.7%, a difference of just over 2%.

I have attached the statistics and an updated issue paper on funding formula equity which now includes this new information.
